

CB2-101 – Bioinformatics Computing

GBSC 703-01A (3 Credits)*

Computational Biology and Bioinformatics (CB2) Course at UAB
<http://cmb.path.uab.edu/training/cb2-101.html>

Fall 2019
Nov 1- 15, 2018
9:00 a.m. – 1:00 p.m.
(Location: Volker Hall VH073)

Course Director:

Malay Basu, PhD
West Pavilion, Room P220
934-5251
malay@uab.edu

Course Program

Week 1:

Introduction to Linux
Linux Commands and Scripting

Week 2:

Unix toolchains and programming languages
Introduction to R and Bioinformatics data parsing
Basic statistics in R
Bioinformatics using R
Reproducible research in R

Week 3:

Homology search BLAST and HAMMR
Advanced topic: Molecular evolution
Large-scale data analysis/introduction of NGS
Basic pipelines in NGS
Mutational processes and VCF
Introduction to RNASeq

Reference:

Bioinformatics Data Skills (2015) Vince Buffalo

Registration:

The course requires registration through online form:

<https://forms.gle/F1RC7ZBwCqHUBYv79>

*** If you're a graduate student and willing to get credit for this course please contact the course director directly.**

*** Earlier version of the course was a prerequisite for our advanced bioinformatics course, CB2-201. Because of the restructuring and incorporation of many materials from this course into the current one, there will be no CB2-201 offered next-year.**
